System of stairway rails and  
balustrades made of stainless

Examples of balustrades

We produce the balustrades of 50mm, 42.2mm and 38mm pipes and of 40x40 and 40x10 profiles. We recommend a 12, 16 mm pipe and 5x15 flat bar as infills for all types of balustrades. We also use safety or glued glass of various colours and thickness. Handrails are produced of different type of wood (beech, oak or ash). Outdoor balustrades are manufactured from exotic Merbau wood or of stainless steel which is afterwards powder painted in woody colour. All models are fixed with a post connector or stair/side mounted.

The components of the balustrades are manufactured from high quality stainless steel casts (grade of steel: 304) and acid-proof stainless steel (316). Therefore, it is a perfect solution for indoor (304) and outdoor (316) projects. Finishing: satin or polished.
